

CenterPoint[®]

FUND ACCOUNTING

CenterPoint Fund Accounting Backgrounder

Red Wing Software has a long history of developing accounting and payroll software products, several of which have included fund accounting features. Some of these include Red Wing DOS Accounting, Red Wing Windows Accounting, TurningPoint Accounting, and Perception Accounting. (The Perception product has been particularly well-received by municipalities nationwide.)

Because of the success in the field of fund accounting and a steadily increasing number of municipality customers, Red Wing Software began development of a product focused on the needs of those customers.

Building on a growing customer database, Red Wing Software launched the next generation of fund accounting software by releasing CenterPoint Fund Accounting. Using .NET and an SQL database, CenterPoint Fund Accounting is up to the highest standards in software technology. This product combines the core functionality of Perception with additional benefits and tools for fund accounting and municipality management. Fund Accounting software users will find the budgeting and reporting processes to be particularly strong and easy to customize to their own needs. CenterPoint Fund Accounting contains a direct interface with payroll and a utility billing package as well.

CenterPoint Fund Accounting is available directly from Red Wing Software and at the local level through the reseller network. Whether users choose to purchase directly from Red Wing Software or via a reseller, training and implementation is available from knowledgeable, technical support specialists.

Positioning Statement

CenterPoint Fund Accounting Software for Municipals is ideal for cities and towns with populations of 350 to 3,500. These smaller organizations can save significant money with CenterPoint Fund Accounting while still retaining functionality needed to manage their financial information.

CenterPoint Fund Accounting software contains in-depth fund accounting, budgeting and GASB recommended format reporting capabilities as well as integrated payroll and utility billing. The system was built using .NET technology, ensuring data security and compatibility with the Windows[®] Vista operating system.

Unlike other fund accounting software, CenterPoint Fund Accounting contains tools specifically designed for municipalities, yet is affordable.

Value Proposition

CenterPoint Fund Accounting contains tools specifically designed for municipalities to affordably manage their funds.
